

**JULIUS
K-9®**
the original

K9 Power

VS.

IDC® Power

Main Differences Between the Julius K-9 Original Power Harness and the IDC Harness

1. Reflective chest strap of the IDC Harness is lower on the chest bone, so it does not put pressure on the neck of the dog.
2. The strap under the chest of an IDC Harness is rectangular and sporty, the buckle is now at a higher point of the body, so it doesn't effect the mobility of the front legs.
3. The saddle part of the IDC Harness covers a smaller surface on the side of the dog.
4. The label of the IDC harness is fixed diagonally, giving better visibility from any angle.
5. There is a new for closing the handle of IDC Harnesses size 0 and above.
6. There are torch (flashlight) holders on the most practical parts of IDC Harnesses size 0 and above.
