

BALANCE™ HARNESS

Unbuckle both **BUCKLES**,
then check if the **NECK
STRAP** is loose enough to slide
over your dog's head.

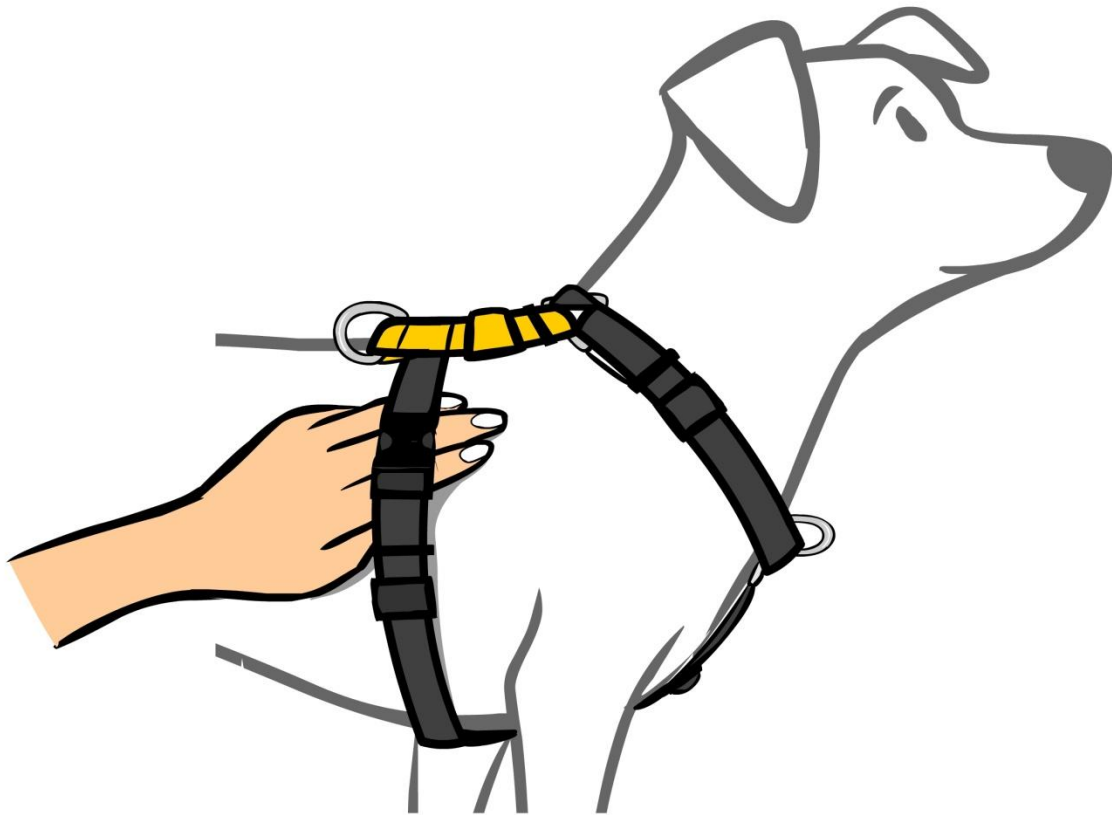

Adjust **COLORED STRAP** so the **GIRTH STRAP** is behind the elbows, not touching the elbows and not behind the rib cage.

When adjusting the **NECK** or **GIRTH** straps, all **SLIDERS** should be equidistant from **BUCKLES**, i.e. adjust both sides equally.

Loosen the CHEST STRAP so that it allows the GIRTH STRAP to be far enough behind the elbows, then check the CHEST STRAP to make sure it isn't too loose.

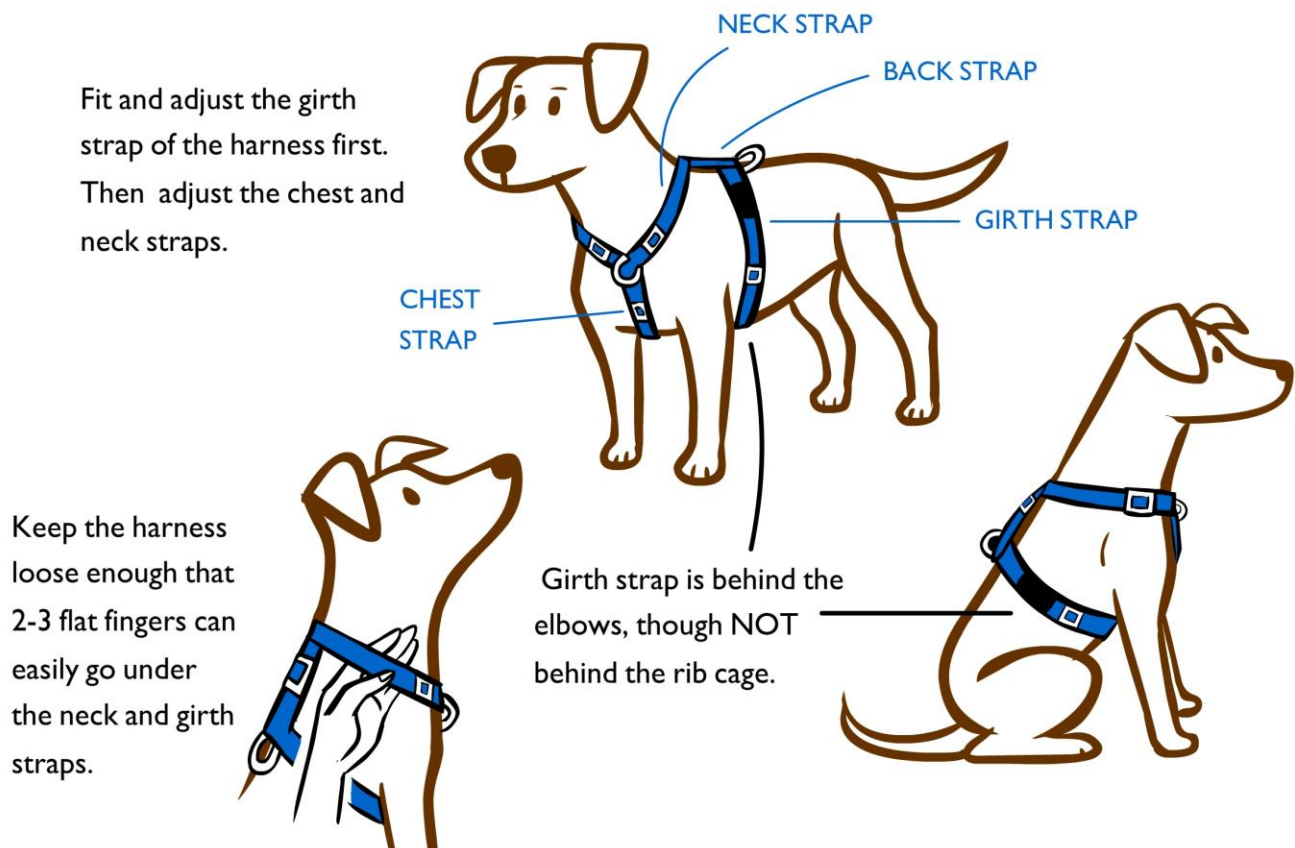

Check to make sure at least 2-3 flat fingers fit under all the straps.

WRONGLY-FITTED HARNESS

CORRECTLY-FITTED HARNESS

Check fit in standing, sitting and lying down. It should be comfortable in all positions.
