The scientific application of animal nutrition has been directed at trying to correct or prevent nutrient deficiencies. Less consideration has been given to the biochemical balance of these nutrients; the most important of which are the trace elements. By Julie Casper, L. Ac.

Activities such as running, jumping, turning, and negotiating equipment rely on the strength and stability of the psoas. This month's exercises are for strengthening the psoas as well as the hips and hind limbs. By Bobbie Lyons, Cert CF

### 48 Training with the Stars: Dawn Weaver

Ask Dawn which handling system she uses and she'll tell you "the dog's." Throughout her agility career, she has strived to take her cues from her dogs and adapt her handling to them, rather than the other way around. By Sally Silverman

### 55 Class Plans from Happy Dog Ranch

One of the challenges instructors face each week is designing exercises and courses that require little moving of equipment between groups and challenge all the students in the class while not making it so difficult that they cannot be successful. By Kristy Netzer

Arousal taints (for better or worse) every choice our dogs make and can even result in them being unable to make a choice. But everywhere we expect our agility dogs to perform is highly arousing, so it's critical to understand arousal and how to work with it. By Tom Mitchell

### 64 When "Run Faster" Isn't an Option, Part 4: University
