Time Warp is a game that tests the dog's ability to take direction and work at a distance. The focus obstacle is traditionally the weave poles. By Bud Houston

Some of the photos in this issue may look rather dramatic when it comes to how much the dog is bending as he weaves. At the time of this issue's original publication (2003), the specifications for the distance between the poles were as follows:

AKC: 20" to 24" (22" preferred)
NADAC/ASCA: 20" to 21"
USDAA: 18" to 21"
