

Plans for a Clip on Wing

Quantity	Description
6	1" PVC Color Pipe X 36" long
1	Wing Clip Pack
2	1" 3 way Tee PVC Fitting
1	1" PVC End caps
6	1" PVC Elbows
1	Clear PVC cement
2	Plastic Lattice or other insert

- Step #1: Cut (4) 16" long cross pieces using 2 pieces of 36" pipe
- Step #2: Cut (4) 29 1/2" long uprights using 4 pieces of 36" pipe
- Step #3: Cut (2) 6 1/2" long legs using leftover pieces of pipe
- Step #4: Using PVC cement glue the uprights and cross pieces into a box. Do this by laying the pipe and fitting on a flat surface, (this will help keep your wing square). Each box should use (3) Elbows and (1) 3 way fitting. Orientate the 3 way fitting so that you can attach the leg as shown. (Hint: Apply the glue on the inside of the fitting then insert the pipe)
- Step #5 : Using PVC cement glue the end caps onto the 3 way fittings.
- Step #6: Using PVC cement glue the end caps onto the legs.
- Step #7: Attach the wing clips using the supplied screws at the locations shown in diagram
- Step #8: There are lots of options for the insert of your clip on wing. Poster board photos or fabric are just a couple. I've shown plastic lattice here. Each piece is 12" X 30". Attach using #10 button head Tek screws at the top and bottom of frame.
- Step #9 Go have fun with your dog!
