

Folding Wing Jump Assembly Instructions

1.) Using a utility knife or cutters, remove each of the clips from the plastic frame. Make certain you have trimmed the parts to be free of any sharp edges. They should be trimmed flush as close as possible.

2.) Rotate legs and upright into position as shown.

3.) Attach each of the fabric clips. The small bump on the large clip should be facing up. It is easier if you start by pushing a corner onto the pipe and then rotate the clip into position.

4.) Attach the fabric by sliding the top loop over the large clip and pushing the grommets over each of the small clips

5.) Slide the clips along the pipe to achieve the proper position and correct tension of the fabric. If you try to make the fabric too tight it may cause the jump to fold.
