Set of 12 metal base weave poles

Your set can be constructed as 2 sets of 6 weave poles or as
A set of 12 continuous weave poles which can be used offset
Or locked in a straight line.

Your kit contains 3 sizes of smooth round headed bolts and a metric hex key
tool

It is only necessary to utilize the bolts if you wish to lock your
Weaves in a straight line

If you do the short bolts are used at the ends
The medium length bolts are for the mid sections
And the long bolts are for the joiner bars connecting the two sets of six
weaves
the short bolts are for the ends
and the medium bolts are for the rest of the project.

Once the base is configured
how you like it
Screw the poles into place
