

Wrapsit Installation Instructions

1: Lay the Wrapsit open with the unit's inside floor facing up and the extended seat panel in the front and flat on the ground.

2: Place the closed chair in the center of the Wrapsit floor with the front of the chair facing the extended seat panel of the unit.

3: Slide the chair into open position while guiding the chair's four feet into the four corners of the Wrapsit base.

4: Pull the front of the Wrapsit up and over the front corners of the chair seat. It may be a snug fit initially but it will loosen over time.

5: Lay the seat panel on the seat of the chair and secure the corresponding hook and loop tape at each side of the chair.

6: Pull the back of the Wrapsit unit up to meet the seat extension at the rear of the chair. Evenly engage the three security clips to the chair between the seat-back uprights.

7: Lay the security flap onto the rear chair ledge and secure the hook and loop tabs at each end to the corresponding hook and loop on each side of the Wrapsit unit.

8: Hang the wrapping panel by matching the center hook tape to the loop tape on the center of the unit's back panel.
